

Apache Zeppelin

Team 19

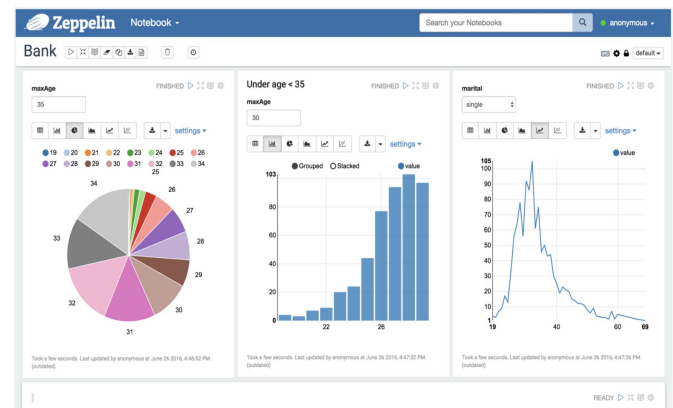

As the world continues to become increasingly digital, data science pipelines are steadily moving online. Apache Zeppelin is a relatively new web-based notebook that adds data exploration, visualization, sharing, and collaboration capabilities to Spark. Python is supported, as well as an increasing number of other programming languages including Scala, Hive, SparkSQL, shell, and markdown. Apache Zeppelin provides a “Modern Data Science Studio” for Data Ingestion, Data Discovery, Data Analytics, Data Visualization and collaboration.

Language Support

Dashboarding

Use Cases

Delta Lakes

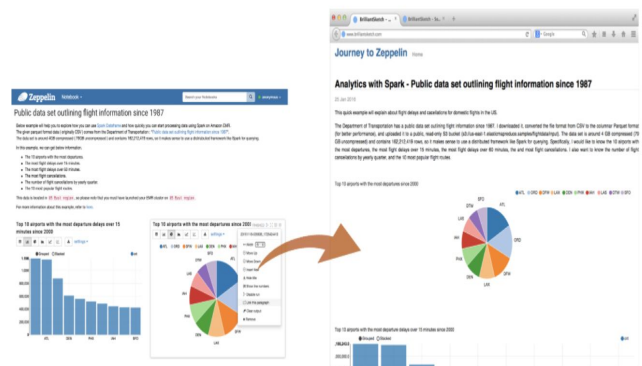

Social Network Analysis

Integration with AWS

Collaboration

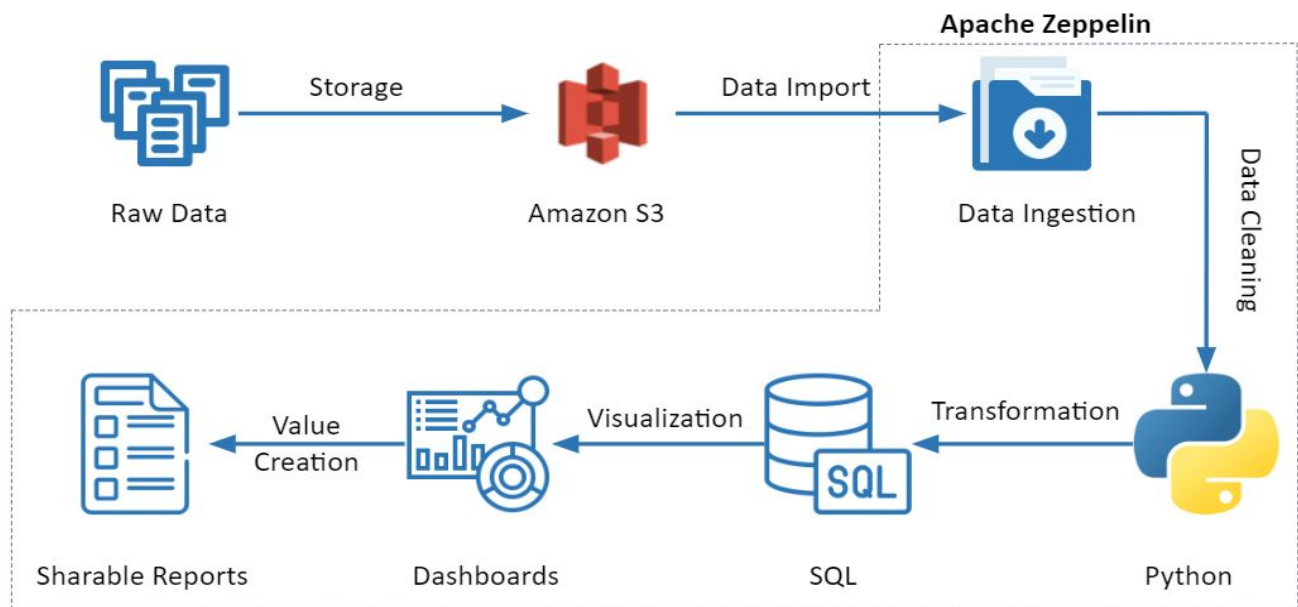

- Now collaborate with ease with security settings and report sharing

Advantages

Restrictions and Grant Access	Security	No Security Functions
A wide range of interpreters	Interpreters	No interpreters added in
Multi-user config on one server	Multi-user Capability	No support multi-user config
Interactive visuals at faster rate	Plotting of graph	Output charts using plotly lib
